

## **Position 1**

### **Title**

Graduate Programmer. (2009 graduates will also be considered.)

### **Salary Range**

Negotiable depending upon qualifications and experience.

### **Duties**

The appointee will contribute to a diversity of advanced software development projects. The positions demand considerable flexibility to move between projects depending upon the portfolio of projects that exist at the time. You will also be expected to assist with technical support of the company's infrastructure, maintenance of the company's quality system and with pre-sales commercial activities as required.

Although our projects are substantially undertaken in-house, there could occasionally be the need for you to work on clients' sites for extended periods of time.

### **Required Experience**

0 to 2 years.

### **Required Qualifications**

A good honours degree in computer science, mathematics, engineering or similar, is required, together with demonstrable mathematics competence (e.g. an A or B grade at 'A' level). The role could also be of interest to a new PhD graduate.

### **Status**

Open.
